The European Open Science Cloud

Wednesday, 25 November 2020 09:00 (20 minutes)

EOSC - The European Open Science Cloud is Europe's response to the new circumstances which came with the rapid development of information technologies. The EOSC ambition is to become a network of open research data, services and research infrastructures. The EOSC is a key part of the transformation of science towards Open science and thus towards better science, which will be able to cooperate more closely and effectively with all social systems, including the economy. In this way, the EOSC will be one of the important factors in digitalisation and thus one of the cornerstones of a competitive Europe in the increasingly volatile global context. The non-profit association EOSC was established on July 29, 2020. The Ministry of Education, Science and Sport has been involved in the creation of the EOSC for several years, and in the future, it will actively support the inclusion of Slovenian researchers and research organizations in the newly established association.

Presenter: Mr STERLE, Peter (Ministry of Education, Science and Sport)
