FAIRification of Slovenian Open Access Infrastructure

Wednesday, 25 November 2020 10:45 (20 minutes)

We will describe the national open access infrastructure and the innovations that this infrastructure will enable by the end of this calendar year. A presentation of the FAIR concept follows this and how it is possible to integrate it into the processes (FAIRification) to support the life cycle of research datasets and the inclusion of a national persistent identifier for digital objects. Finally, we will present how we have established interoperability between the national open access infrastructure and the national COVID-19 data portal, found on <https://covid19dataportal.si/>.

Presenter: Dr OJSTERŠEK, Milan (University of Maribor)
